

Neurofeedback Technician

Part-time role, £10-£15 per session (pro-rata £13.33-£20/hour, OTE £20-£30K/annum)

London & Egham, Surrey.

Be among the first in the UK to offer this revolutionary therapeutic service.

Neurofeedback provides direct feedback to the brain on its own performance, enabling the brain's own self-regulating capability to adjust its response based upon that feedback, to improve brain performance and mental wellbeing.

Just like physical therapy, repeated sessions enable the brain to learn to operate better on its own. With considerable untapped potential for the UK, Neurofeedback crosses the boundaries of psychology and medicine.

It has been shown to improve symptoms of dysregulated brain function including psychological trauma, anxiety, ADHD, autism, OCD,

Based in your designated clinic or clinics, you will work under the supervision of an experienced Neurofeedback Practitioner. You will be responsible for the delivery of neurofeedback therapy sessions, to a protocol agreed by the Practitioner.

This will include understanding protocols, scalp preparation and electrode attachment and equipment operation. You will liaise with the supervising Neurofeedback Practitioner who will determine protocol changes in response to client feedback.

We will provide full training and support to equip you to be a confident and effective Neurofeedback Technician. You will have ample opportunities to develop and expand your role.

You will be a quick learner, naturally curious and passionate about making a difference. You will preferably have experience working with adults and children in a helping role.

You should also be comfortable working on your own, although you will be given all the training and support you need.

BrainTrainUK leads the field in the UK and beyond, with a reputation as 'the Neurofeedback practice you can trust'. We were 1st with ILF Neurofeedback in the UK, 1st with Advanced Brain Mapping in Europe, and 1st with SKIL-based Default Network Neurofeedback outside the Americas.

We scan the horizon for next-generation developments, and our team-based practice makes new developments rapidly available through our clinics. As a world-leading multi-modality practice, clients can trust us to have the best solutions.

As a BrainTrainUK Neurofeedback Technician you will be at the leading edge of the field.

This is an opportunity to gain the knowledge, experience and confidence from an internship, with world-class training and significant earning potential. We expect that our most successful Neurofeedback Technicians will graduate to Neurofeedback Practitioners in 2-5 years.

You will be a key part of our team, changing people's lives on a daily basis.

Job Description

Note: full training/education will be provided on all requirements – no previous knowledge is necessary

- Undertake training as necessary
- To demonstrate knowledge of the history and theory of the field
- To provide Neurofeedback Technician services to clients, including:
 - Meeting and greeting clients
 - Preparation of scalp and application of electrodes/cap
 - Operation of Neurofeedback equipment to agreed protocols
 - Monitoring client feedback during session
 - Liaising with Neurofeedback Practitioner and client between sessions, planning sessions
 - Capturing EEG for Advanced QEEG Brain Mapping (AQBM) report
 - Analysing EEG and preparing AQBM reports
- Administrative tasks including managing client appointments in Outlook, creating invoices in Xero
- Demonstrate our values: Make a Difference | Service | Trust | Leadership | Independence | Respect

Person Description

- Undergraduate or graduate in psychology, medicine, neuroscience or related discipline
- Open-minded, optimistic, opportunity-focused
- Bright, likely AAB at A Level
- Quick learner
- Superb attention to detail
- Excellent personal organisational skills
- Experience working with adults and children in a helping role (advantage)
- High self-awareness

- Comfortable working alone and in a team
- Able to cope under pressure
- Flexible, available for 5 hours a week initially, ideally this could grow up to 30 hours a week, but we appreciate that studies must take priority. On Target Earnings (OTE) of £20K-£30K pa are based on 40 sessions per week x 50 weeks.

Training Syllabus

- Pre-reading
- History, theory introduction
- Technical training:
 - NF modalities:
 - ILF
 - Alpha-Theta
 - Synchrony
 - Default Mode Network
 - Amplitude
 - Electrode application, QEEG cap fitment, fault finding
 - QEEG capture, analysis, report preparation
- Clinical training: Client relations, intake, planning, support
- Operational training: Client relations, non-clinical processes
- Continuous learning: ongoing access to BrainTrainUK Knowledge Base

Reward

Payment will be £10-£15 per NF session, depending on experience/qualifications, paid monthly. NF sessions are nominally 30 mins of actual neurofeedback, and normally take 45 minutes from client arriving to client departing.

A minimum monthly payment of £250 will be made.

Training activities will not be subject to additional payments. The first monthly payment will be made at the end of the calendar month in which training commences. If this is a minimum payment it will be pro-rated.

For other activities such as QEEG capture and analysis, pay rates will be agreed based on outputs and a nominal rate of £20/hour.

Applications
